

Turning **your ideas** into digital reality

**We are digital technology pioneers specialised
in software development for **mobile devices**.
We strive to turn your vision into digital reality.**

Not only are we great commercial specialists,
but also **passionate engineers**.
Thus, our portfolio covers the entire range of digital
technology services, starting with development of intelligent
energy efficiency solutions and finishing with
implementation of comfort at home ideas.

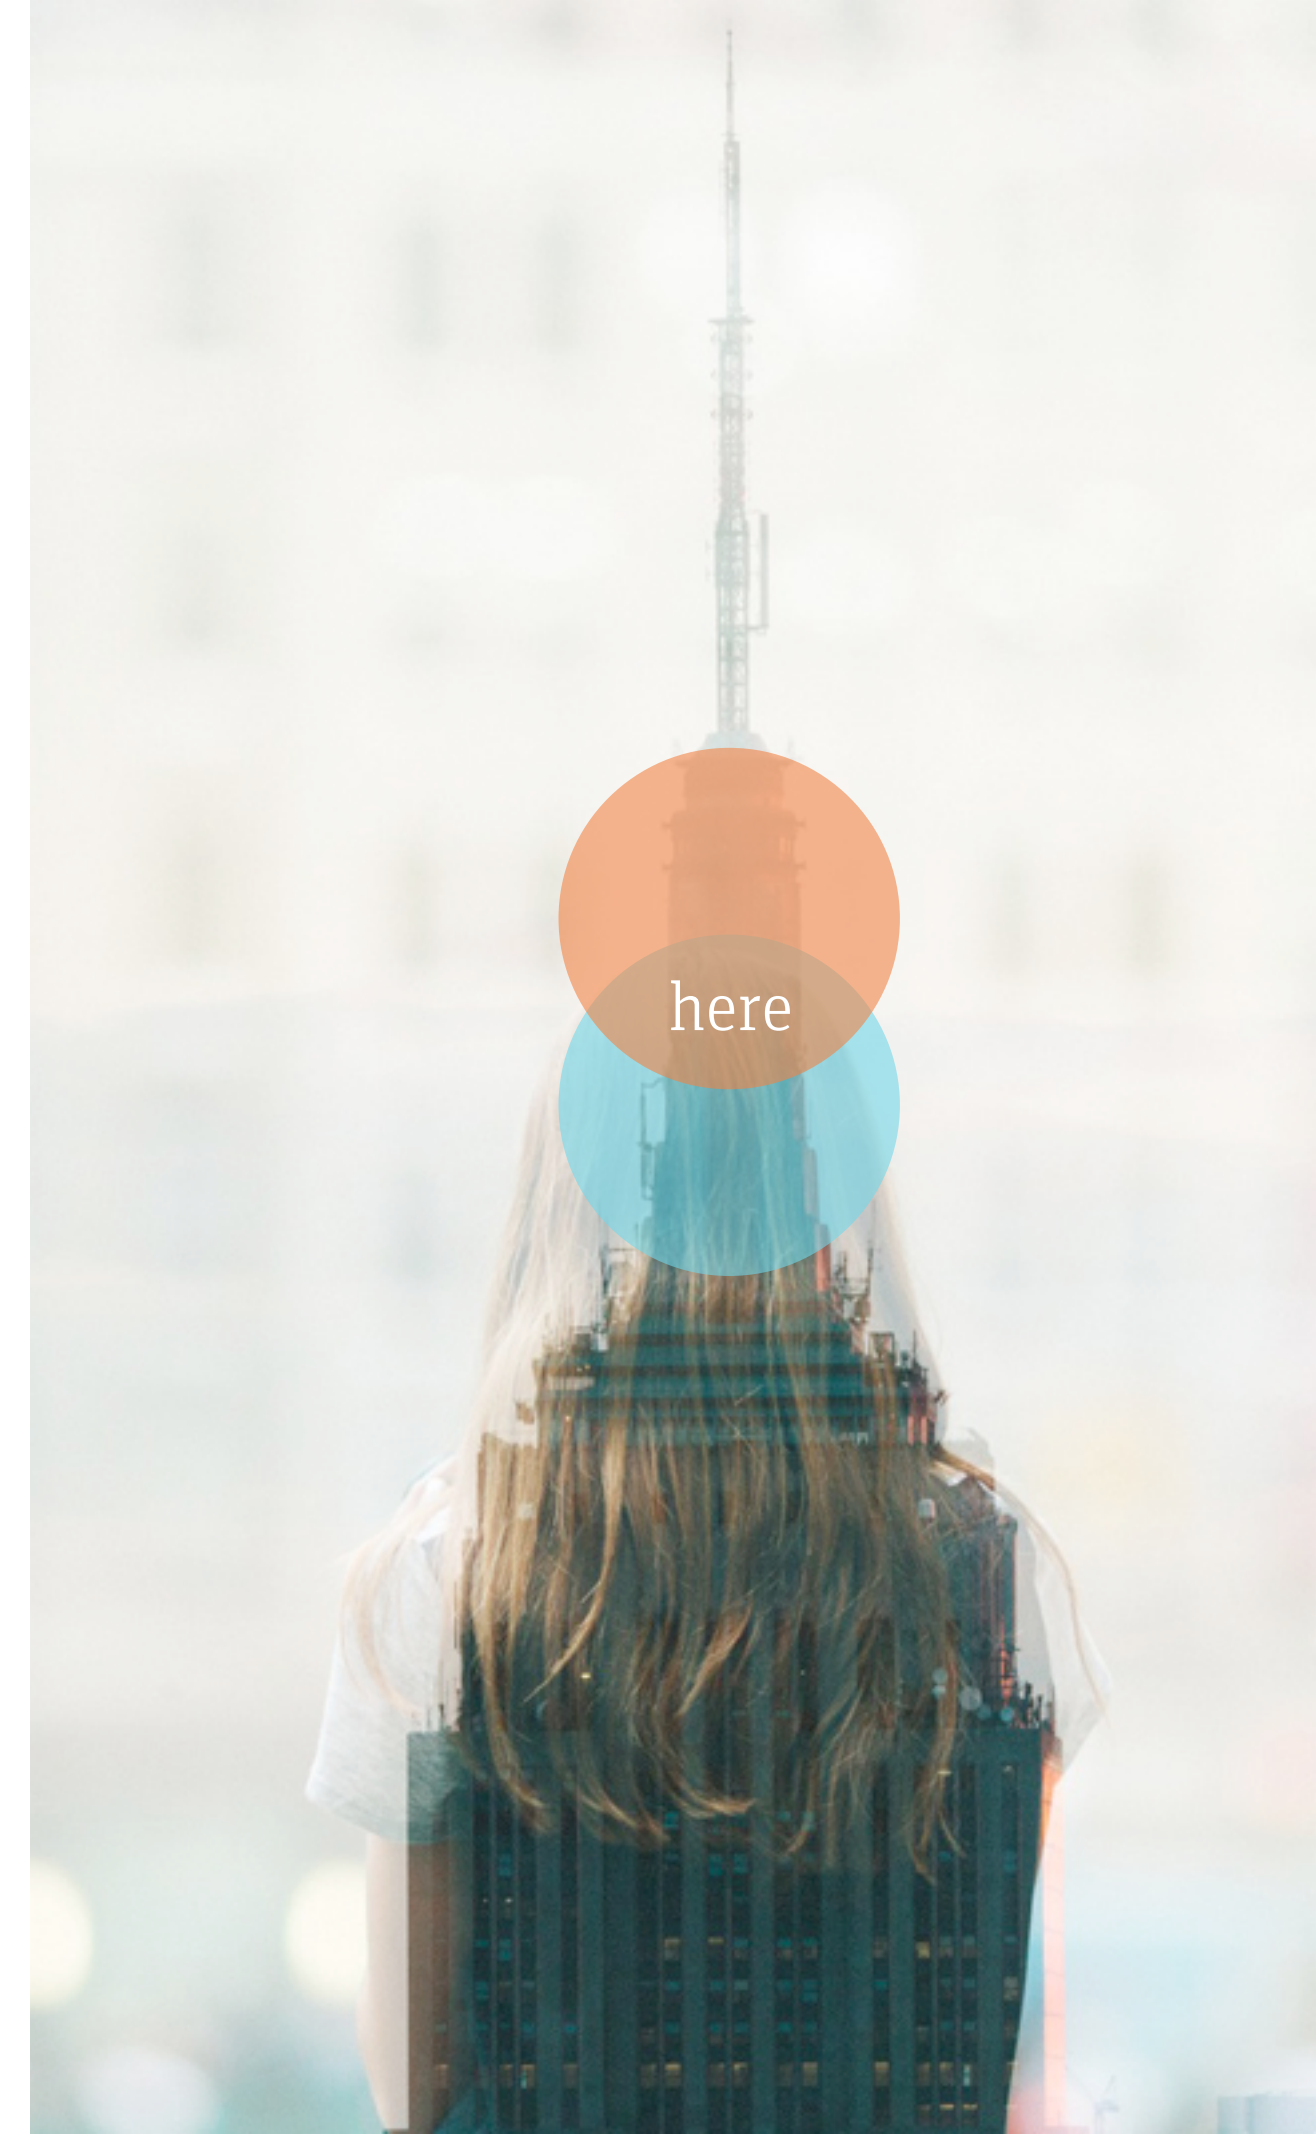

Internet of Things and Smart Cities.

Living and breathing tech, Innopro Advanced is counting many years working in innovation and development.

We work towards creating 'turnkey' solutions that let our users connect real world with cloud computing through mobile applications.

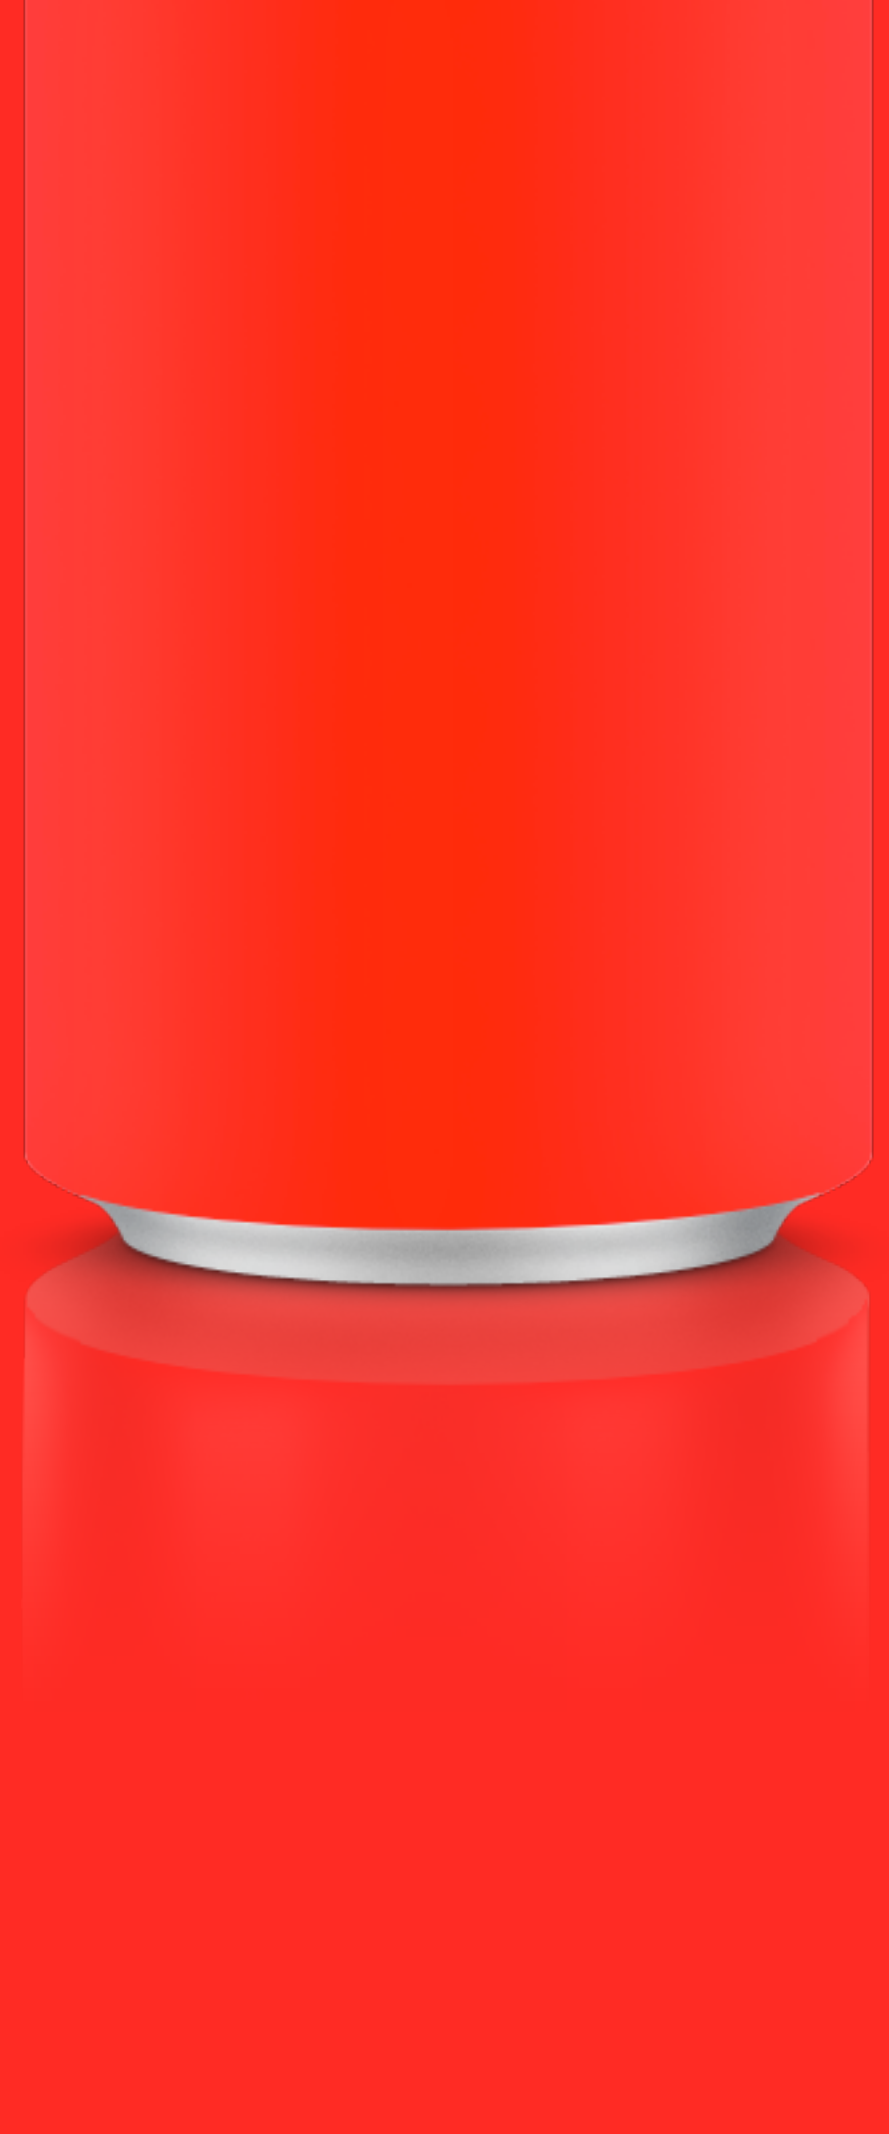

Innopro Advanced has participated in the development of intelligent solutions in sectors such as weatherisation, energy efficiency and home comfort, allowing users to have simpler and more efficient lives.

Coca-Cola

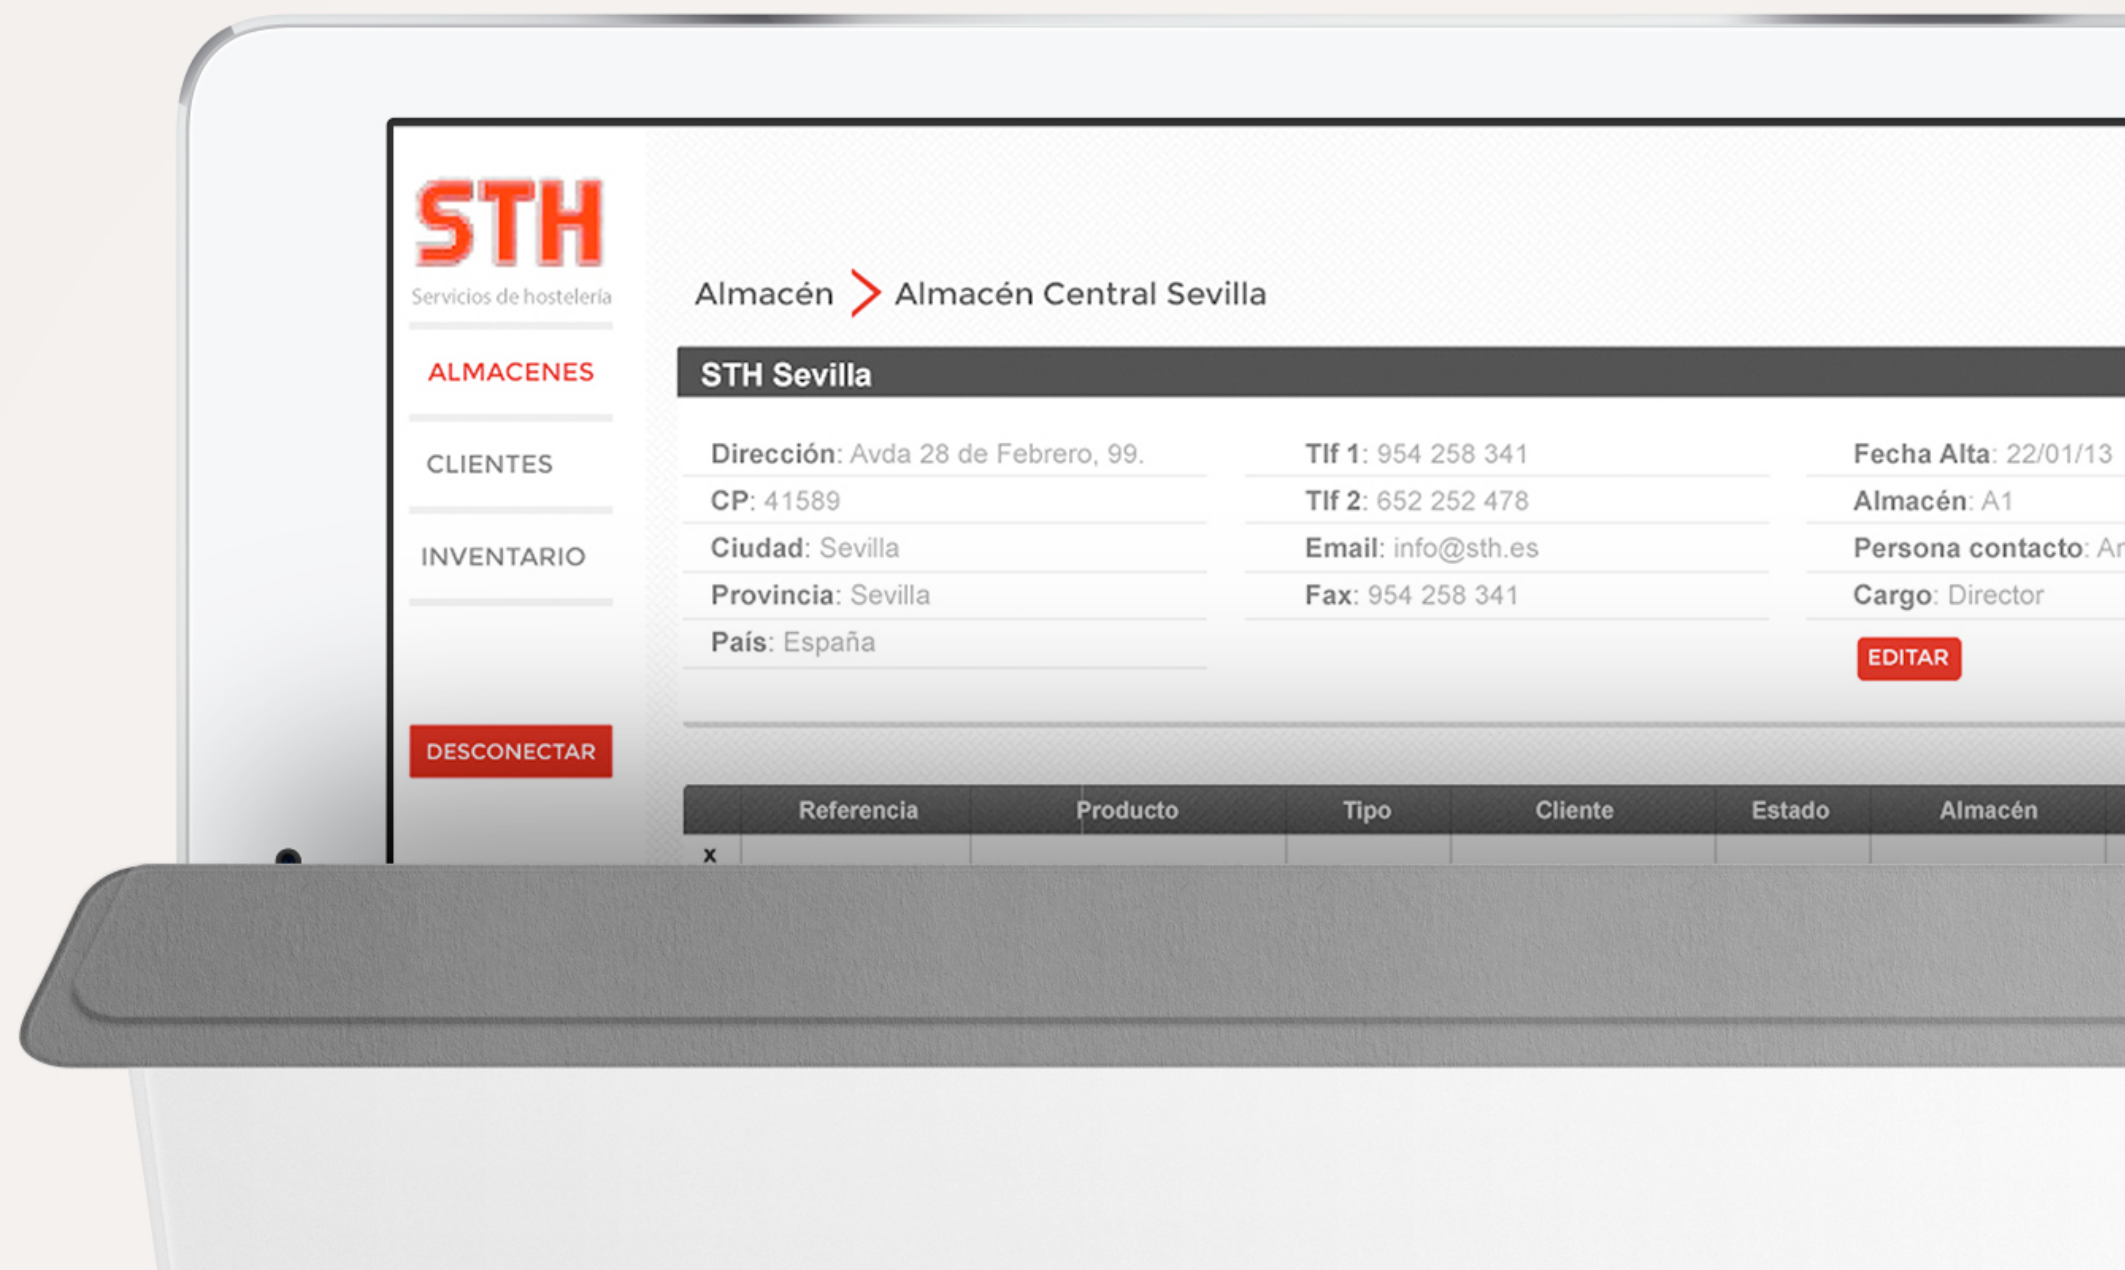

Technology

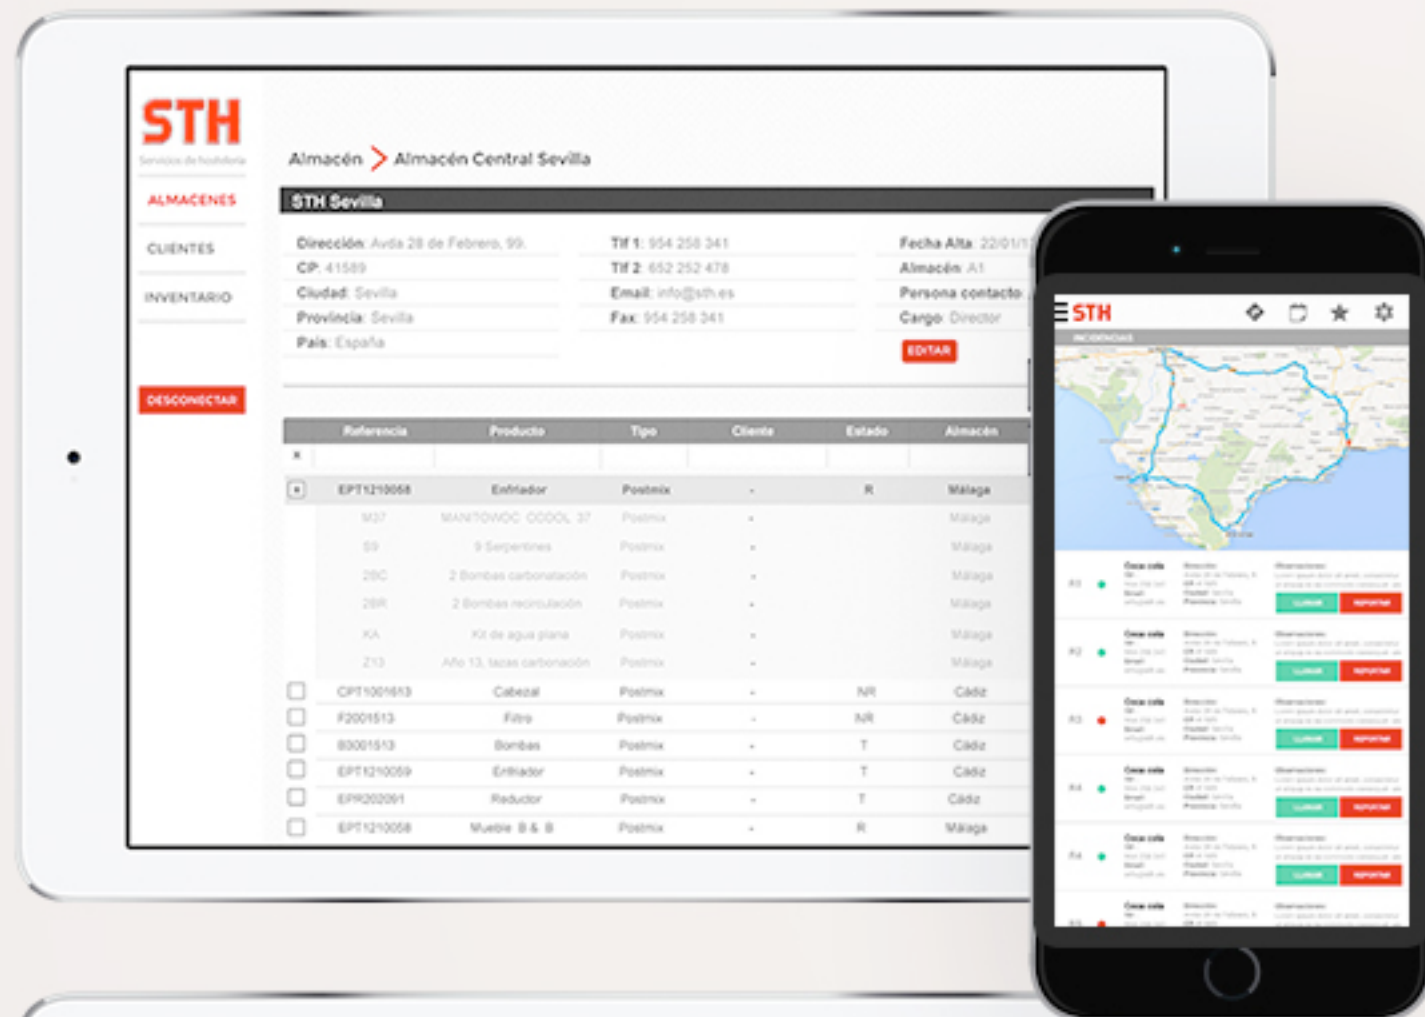

Laravel (PHP and MySQL)

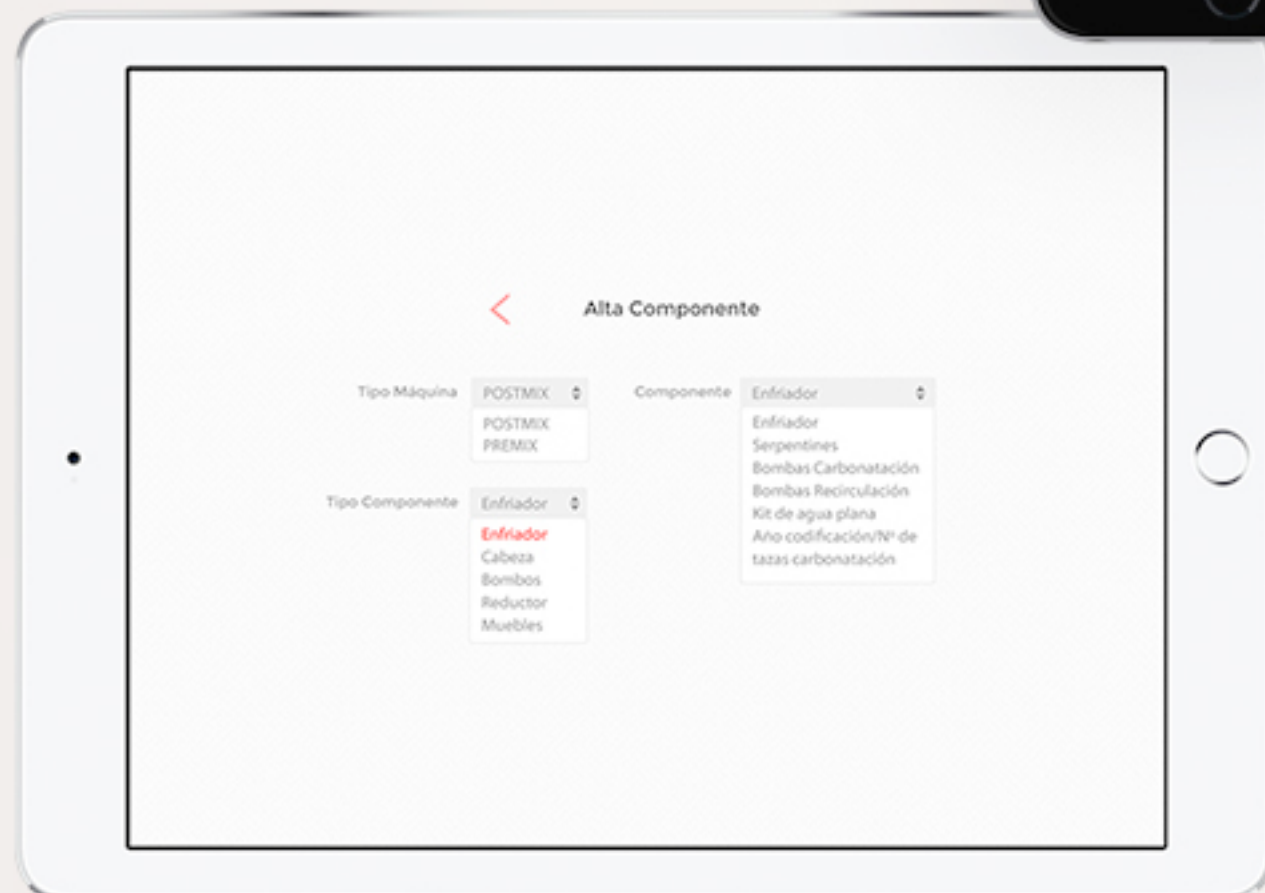

Because of owning thousands of vending machines across the country, Coca-Cola was facing serious challenges in terms of their management. Thus, aiming to ensure that their sparkling blast is easily accessible to each and every one, they wanted to create a solution that would help them to manage inventory **in a simple and more efficient way**.

To do so, we came up with a **smart M2M solution** that allowed stock managers to do their job more efficiently by utilising our mobile application.

The app was designed to inform about the inventory of every vending machine in Spain. Not only has this enabled people in charge of refilling to organise their trips more effectively, but also it has allowed them to understand people buying behaviour and position the products more strategically.

Airzone

Technology

iOS and Android, XML
and Airzone hardware

For the last 10 years Airzone has been one of the leading companies in developing, manufacturing and marketing of HVAC ducts.

The company is **focused on improving our comfort and rationalising energy consumption.**

Working hand in hand with the Research and Development Department, we have developed a mobile application that is applied for both iOS and Android and designed to enable users **to connect to the intelligent air conditioning system from any location in the world.**

The system empowers its users to control the temperature of each room or a workspace individually through a single mobile application.

The Airzone app was presented to the market in the HVAC Fair held in IFEMA Madrid on February of 2013 with a great success and is now being marketed throughout Europe.

Telefónica

Technology
iOS and Android
Thinking Things

Our team is proud to be one of *Telefónica's* M2M global partners. We are actively involved in its "Thinking Things" projects aimed at developing solutions that connect our everyday lives to the network through smartphones, tablets, M2M cards within the frame of "**Internet of Things**".

Working closely with *Telefónica* 'Thinking Things' Technical Department, we have developed an app, for both iOS and Android, **that informs users about the temperature, humidity and light in their home area** where the sensors have been located, and helps to them optimize energy consumption at home.

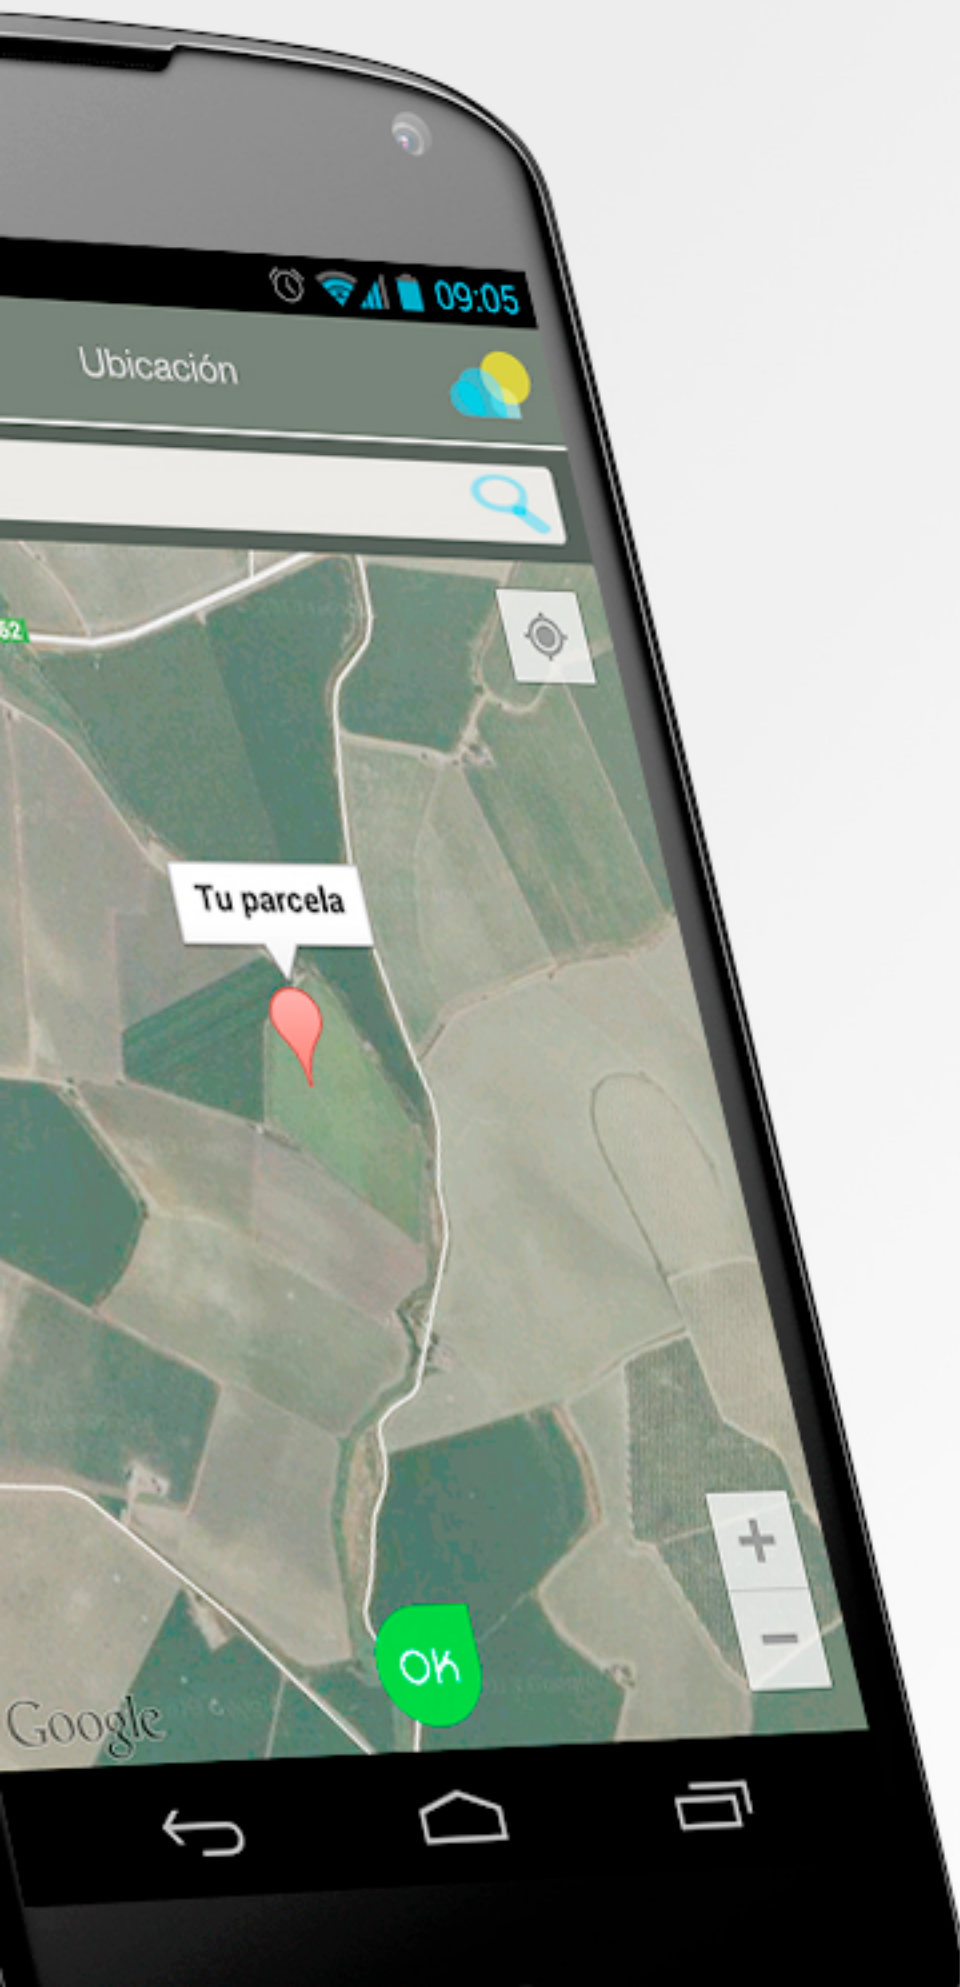

Applantia

Technology

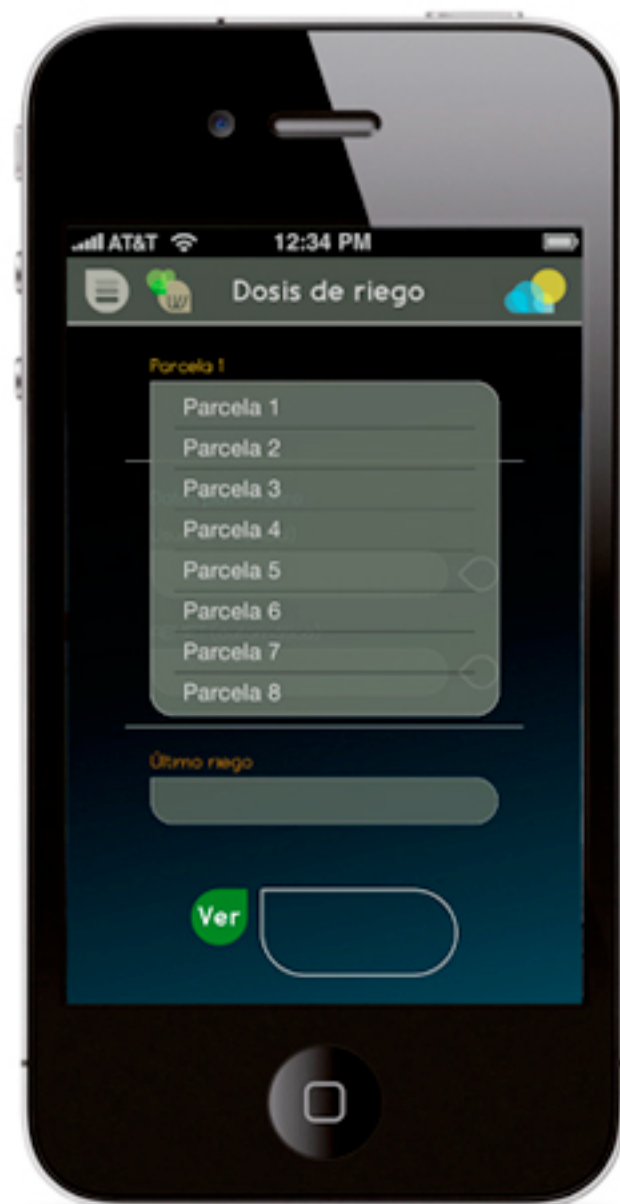

iOS and Android

Bluetooth 4 and Laravel

Applantia is a company devoted to research, creation and production of applications that are designed to control and **improve agricultural productivity as well as energy efficiency in farmlands.**

In order to improve productivity in the sector and efficiency of irrigation of agricultural fields, working hand in hand with their R&D department, we have developed a **system that allows its users to control the amount of water needed for every hectare** in the field enabling them to look after each crop individually.
